COLORECTAL CANCER UPDATE

ONLINE SCREENING TOOLS

THE FUTURE OF
COLORECTAL SCREENINGS

Changes in Epidemiology of Colorectal Cancer

Cancer historically has been considered a disease affecting older adults.

Between 1990 and 2019, cancer rates among those under 50 rose by 79% with colorectal cancer being notably prevalent in this age group.

**Catch more cases early.
Reduce mortality.
Improve long-term
outcomes.**

45 is the
new **50**

Screening Options at 45

- **Colonoscopy (Gold Standard):**
Every 10 years if no abnormalities
- **Non-invasive Stool Tests (FIT, gFOBT, or Cologuard):**
Every 1–3 years
- **CT Colonography or Flex Sigmoidoscopy:** Every 5 years

Cancer Screenings Save Lives

Online Tools for Screenings

- Which screening is right for me:
<https://intermountainhealthcare.org/services/gastroenterology/colon-cancer-screening>
- Schedule a colonoscopy:
<https://intermountainhealthcare.org/services/gastroenterology/colon-cancer-screening>
- Order a FIT to be delivered to your home:
<https://intermountainhealthcare.org/services/virtual-care/fit-test>

By 2027, we will likely be required to report on follow-up care for positive screenings.

CRC Reporting Has Changed

NCQA now uses electronic clinical data systems for this measure, as of measurement year 2024.

Accurate EMR documentation and billing are more important than ever to ensure proper care tracking.
